

EPD-Finder Platform Build & Launch

- *Build and deploy a public search tool that covers every EPD published in Europe*

LOCATION

remote / hybrid

START

Oct / Nov 2026

DURATION

3-6 months

TEAM

2-5 students / IDP

Environmental Product Declarations (EPDs) are published by dozens of program operators across Europe, each with its own database. ECO Platform aggregates many of them, but often months late and never completely. Existing search tools rely on that single source. We want a tool that connects directly to the program operators, stays current and shows every EPD with its data, authors and validity.

01

Project & deliverables

Reshape it or pitch your own project!

- Analyzed program operator landscape, data access routes, APIs, their costs and relevance
- Built data model, ingestion and hosting that runs cost-effectively
- Created backend and search frontend with a detail page per EPD showing defined data points
- Developed a go-to-market plan to launch the tool and drive stakeholder adoption
- Deployed the tool

02

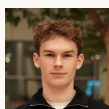

Your profile

- Team of 2-5 with at least one member who codes
- Technical affinity, no computer science degree required
- Curiosity for data, APIs and how institutions share information
- Ownership mindset, you want something live at the end
- Fluent English, German is a plus

03

What's to gain

- A public product with your name on it, used across the entire construction industry
- Hands-on experience across data, product, deployment and marketing in one project
- Deep insight into the European environmental data landscape and its players
- Working student position or long-term role after the project

"We look for people who are up for start-ups and want to build with us."

– Tim Weiler, Founder
